

IDEAS

① Map Ideas

Aus map
Proportional
Symbol map
KEEP

Routes from each city → highlight most important route → most passengers

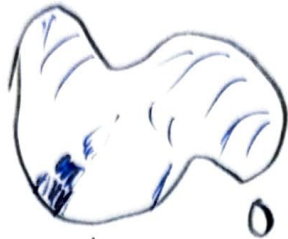

2) Only Sydney Melb

DROP

only showing both cities → less things to talk, more ~~re~~ comparison adv of whole country → more charts to explore different factors → rainfall, delays etc.

3rd) Chloropleth Map | Divyansh Sharma Sheet 1

DROP

Shading depending on most rainfall locations → linking back to flight network
only need one map
- first one

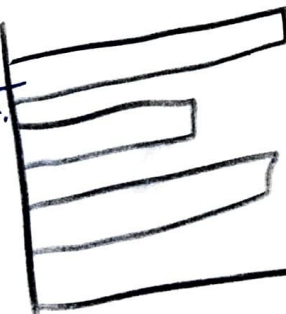

Charts

Donut Chart

- highlighting percentage of customers from each airport
DROP → bit hard in Vega

Routes
mel → syd

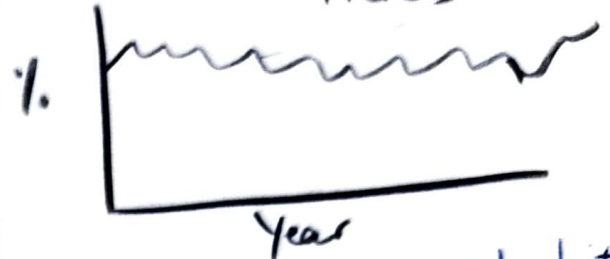

- bar chart showing top busiest routes

Passengers

KEEP

Combine
line graph, Bar → Similar Story
- bar and map

on time performance trends

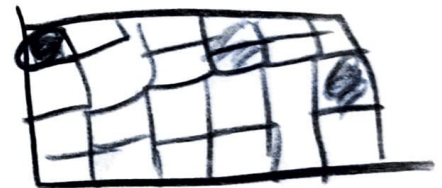

- explore covid bit more dip
Join WITH **COMBINE** **KEEP**

Airport

on time! Heatmap → seasonal delays

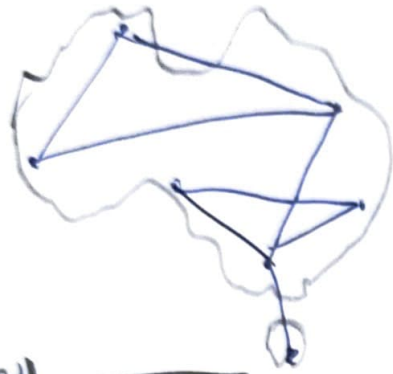

darker month tones → higher perc

Questions

- Could there be an alternative way to convey the best info.
- Will I be able to find lat/long data?

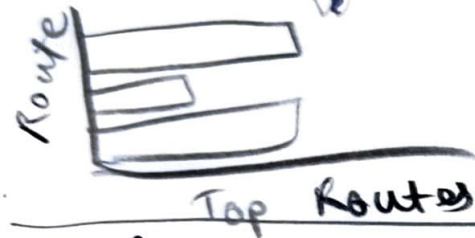

Layout

Major Aus Cities

Map → lighter route
Shade demonstrates
less flights a year

Text next to this
map → showcase
Australia's connectness

Components

- Filter by year
 - maybe filter by route?
- Create slider for year

Sheet 2: 2

Title: Map

Focus

The proportional symbol map will showcase the routes in Australia's flight network. It will also explore the most common routes and rank them on a bar chart in descending order. These charts will work together

Discussion

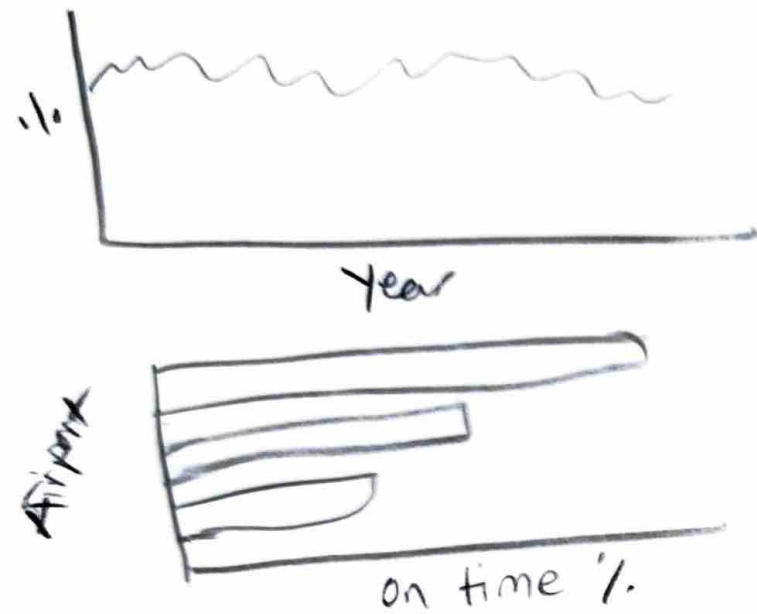

Adv

- clear comparisons of routes in terms of passengers and total flights.

Dis Adv.

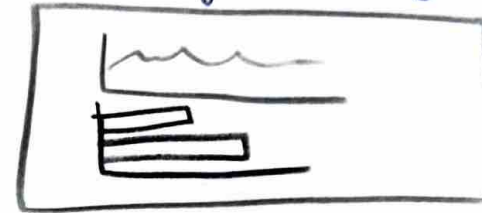

- Could use another chart instead of a bar to avoid repetition. Bar is the best way to showcase data though.

Delays Performance

Focus

Both graphs will be put in one container. One will analyse trends in ALL airports in terms of overall delays, while the other bar chart will once again rank the airports in terms of delays.

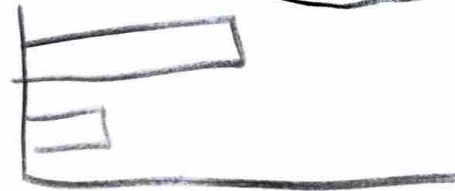

← one container

Components

- Possibly have a dropdown in bar chart, filtering yearly for each airport.

Me

Date: 13/10/2025

Sheet #: 3

Title: Delay Analysis.

Discussion

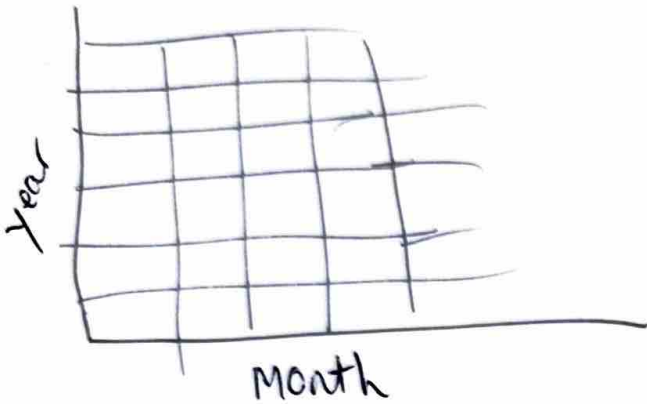

Adv:

Explores delays on a national level, will transition great into the next graph.

Disadv:

Maybe a bit repetitive but will compare on national level as well.

Seasonal Analysis

legend

clear
gradient

- maybe make
colours red as it
is a heat map.

Focus

Heatmap will highlight what months lead to the most delays → also highlighting when Covid happened and its impact on delays (winter months will likely lead to more delays)

Operations.

- annotations and tooltips

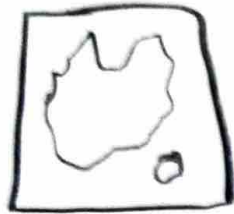

Author: Divyansh Sharma
Date: 13/10/2025
Sheet: 4
Title: Seasonal Analysis

Discussion

Adv: Shows the delays really well. Through colour you can easily see what's going on.
Unique chart

Disadv: Bit Vague in terms of story, could add another graph.

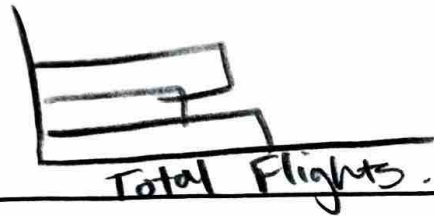

Australia's Flight Network

Text
Text

each
chart
own
container.

Focus

To integrate all charts into one single webpage, highlighting performance of Australia's flight network.

- all charts must flow into giving viewer the main idea through trends and annotations.

- Possible Orders

- Map

- Routes

- Delays, Heatmap, end with possible

Component

Full dashboard, Try to make it as structured and cohesive as possible to best

Storytell about Australia's Flight Network.

Discussion

Design will use a left visual, right text grid layout.

Adv: Strong storytelling, all charts are telling a story

- Fonts consistent

- strong engagement with filters, sliders.

Disadv:

- moments of repetition

- maybe could've used more data?
